

# The First Automated Authorization Management Solution

Authomize enables organizations to automatically manage and secure identities, access and privileges across multi-cloud and hybrid environments

## More Apps, More Identities, More Complexity

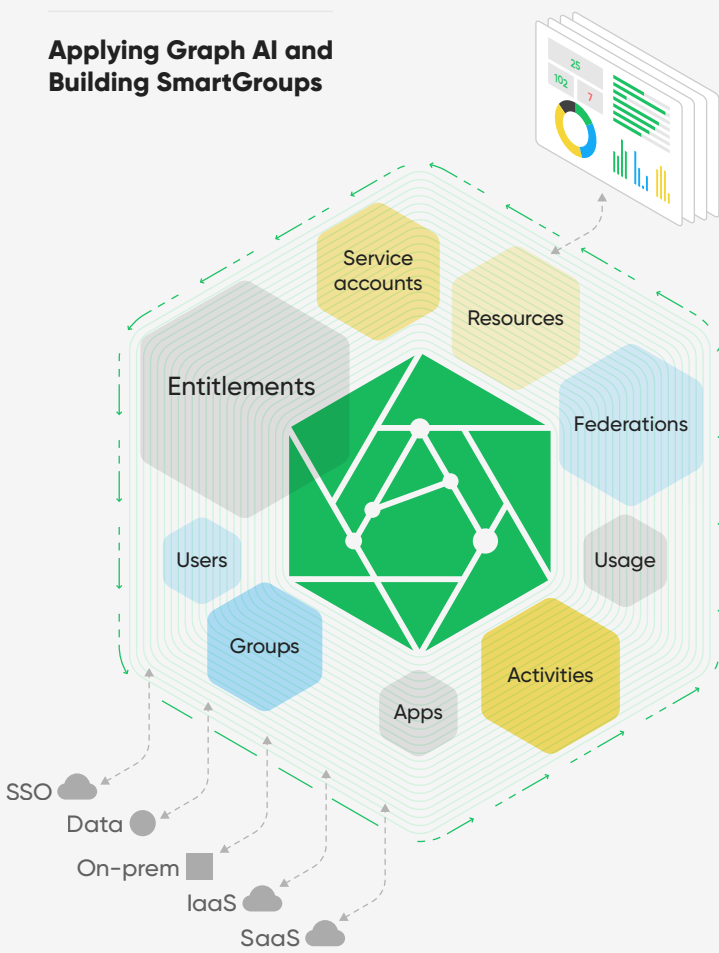

Application and infrastructure authorization is a complex network (literally a maze) of permissions and entitlements that are frequently established on a tactical as-needed basis by IT administrators, application and infrastructure service owners and subject matter experts within individual business functions. This network creates security risks, administrative burdens, and auditing challenges that are impossible to address with existing tools.

## The Authomize Platform

Authomize provides unparalleled insight into the fine-grained authorization privileges currently assigned to individuals, teams and functional departments.

Using our proprietary prescriptive analytics engine, Authomize learns the correlation between cross-cloud permissions, identities, and usage to deliver data-backed intelligent suggestions and identify the root cause of access and permissions issues. Teams can make informed authorization decisions based on the intelligence provided, achieve least privilege, continuous monitoring or securely automate the authorization management lifecycle process, minimizing IT burden and securing the IAM plane in the organization applications.

### Applying Graph AI and Building SmartGroups

### Visibility

Unified and granular visibility across all environments down to the resource and service level and across all of the layers of the multi-cloud applications.

### Security Posture Analytics

Calculating access and exposure risk based on a variety of factors encompassing identity, asset, policy and activity attributes as well as optimize access governance policies.

### Prescriptive Recommendations

Using our ML-based analytics engine Authomize delivers prescriptive instructions on how to achieve a safe and secure state and facilitate audit and forensics activities.

### Remediation & Fulfilment

Adjust or update entitlements assignment directly or by event trigger, enforce IAM guardrails and security baseline policies.

### Intelligent Automation

Automate the full scope of Identity Lifecycle management including Joiner-Mover-Leaver by following the principle of least privilege.

## One Click Deployment

Authomize is offered as a SaaS. The solution is integrated into numerous applications via out-of-the-box connectors, including but not limited to: O365 (incl Sharepoint), GSuite (incl GDrive), GCP, AWS, Azure, GitHub, Salesforce and multiple leading ITSM systems. Authomize also offers an open connector framework that supports both on-premises and cloud-based applications/systems. Authomize supports both pull and push methods to integrate with 3rd party applications using connectors.

“

Okta has clearly solved the user authentication problem that enables enterprises to easily access cloud applications. Authomize is solving the next problem—managing the authorization privileges of end users after they've been granted application access.”

Mark Settle, Former CIO

# Use Cases

## Securing the Cloud

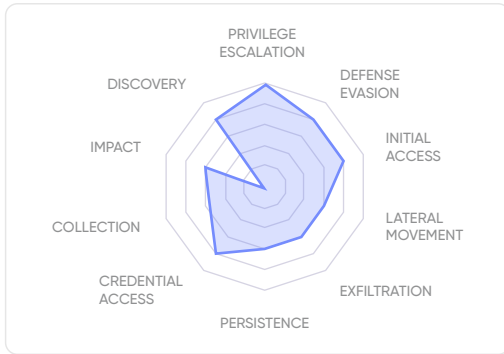

### Achieve Least Privilege

Automatically detect and remove used or unused excessive permissions in any identity, processes, applications, assets.

### Remediate Threats

Proactively discover and remediate data exposure problems, risky activities, anomalous behavior, and threats.

### Machine & App Monitoring

Discover, monitor and govern all types of machines, bots & RPA, 3rd party applications, service accounts, etc.

### Enforce IAM Guardrails

Enforce preventive guardrails and custom policies on any resources, process or activity across any environment.

## Securing the Lifecycle Management

### Access Requests

Automatically approve or deny access requests with an AI-generated justification that your end user can understand.

### Automatic Certification

Automatically approve low-risk access and deliver contextual data to the source owner to simplify the process.

### Secure Lifecycle Management

Govern and control any type of identity in the life cycle stages with data-driven recommendations.

### Achieving Compliance

Easily enforce security and SoD controls across any environment and constantly discover and remediate security violations to meet compliance and audit requirements.

## Strategic Partners

Authomize has established key partnerships with security technology leaders to meet the evolving IAM security challenges.

## Integrations

We integrate with all your cloud applications and systems with out-of-the-box connectors.

and many more

## Business Outcomes

### Enhanced Security

Provides Zero Trust Authorization security across network for on-premises, cloud, and, hybrid environments.

### Cost Savings

Achieve significant savings on integration and operations costs, replacing multiple vendors with one highly capable platform.

### Shorten Time to Value

Integrating in just minutes, Authomize shows value within hours with guided insights and out of the box actionable alerts.

### Navigating Environments Faster

Securely manage identity access permissions in your dynamic environment faster with powerful automation tools, keeping pace with the speed your business demands.

## About Authomize

Authomize enables organizations to manage and secure complex and vastly different applications across hybrid environments. Our Prescriptive Analytics engine helps IT and Security teams flawlessly automate operations around authorization to prevent permission sprawl, maximize productivity, simplify identity lifecycle management, and secure the IAM plane.
